PROGRAM

6:30pm Registration and dinner on arrival

7pm - 9pm Rotating workstations and group case discussions

Breathless and heart failure patients: Closing the gap with transcatheter edge-to-edge repair - Dr Ed Danson (Interventional Cardiology)

Coronary disease, when surgeon and interventional cardiologist work as a team: hybrid revascularisation with robotic assisted minimal invasive coronary surgery
Anterior mediastinal mass: what workups to do and how to manage them - Dr Mohammad Azari (Cardiothoracic Surgeon)

Atrial Fibrillation: Let's identify and treat it together, properly!
- Dr Jayesh Gohil (Cardiologist – Electrophysiology)

Optimising outcomes in older adults: Calcium modification and image-guided PCI - Dr Pratap Shetty (Interventional Cardiology)

Hours: 2 RP Hours

Email if you wish to be removed from our mailing list

LEARNING OUTCOMES

Identify patients in primary care setting with suspected mitral or tricuspid regurgitation.

Explain the role of robotic assisted minimal invasive coronary surgery in management of coronary disease

Select appropriate initial diagnostic investigations to identify anterior mediastinal masses

Outline modern treatments for AF

Recognise older patients at risk of complex calcified coronary artery disease

Understand when to refer for calcium modification and image-guided PCI
